

Most common **ReactJS**  
Interview Questions

What is the difference  
between

**Real DOM**  
and  
**Virtual**  
**DOM ?**

Like and share

# Real Dom

Frequent DOM manipulations are **expensive**, slow and performance heavy.

# Virtual Dom

Ensures that there are **minimal** operations on the real DOM. Hence, reducing the performance cost of updating the real DOM

## Real Dom

Can directly update **HTML**

## Virtual Dom

Cannot directly update **HTML**

Swipe →

## Real Dom

Too much of **memory wastage**. It has to be accessed from page and loaded to memory for any operation.

## Virtual Dom

No memory wastage. Virtual DOM is **already in memory**.
